

Material Safety Statement

For Biotinylated Purified IgG and Biotinylated Affinity-Purified IgG

Use of Product: For *in vitro* research use only.

These products contain sodium azide ($\leq 0.1\%$ w/v) in concentrations below the hazardous thresholds defined by the Hazardous Products Act (R.S., 1985, c. H-3) and the OSHA Hazard Communications Standard (CFR 1910.1200).

Though these products are not defined as hazardous, following standard laboratory practices for handling potentially dangerous reagents is advisable. Federal, provincial/state, or local waste disposal laws should be consulted prior to disposal of even small amounts of these products as sodium azide is considered a hazardous chemical at higher concentrations.

If further details of the hazards of Sodium Azide are required, a chemical manufacturer's SDS can be provided upon request.

The above statements are provided for informational use only and are believed to be correct. ABI shall not in any event be liable for incidental, consequential, third party or special damages of any kind resulting from any handling, use or failure of the products or above information.
